A mercury vapour turbine is a form of heat engine that uses mercury as the working fluid of its thermal cycle. A mercury vapour turbine has been used in conjunction with a steam turbine for generating electricity. This example of combined cycle generation was not widely adopted, because of high capital cost and the obvious toxic hazard if the mercury leaked into the environment.

Take the "electrified, sealed liquid mercury vortex, gyroscopic engine" off of a downed alien spacecraft, and remove the seal, and remove the liquid mercury. Then put in a latched door (with a good seal), to load dirty clothes, liquid detergent, and clean water. Install a drain plug to remove the soapy/dirty water.

How does a mercury vortex engine work? - Quora

An electromagnetic field coil within a closed condenser filled with liquid or vapor mercury, keeping core axis vertical to the shaft. Vertical heat exchanger coils protrude through the ring conductor (ring conductor is also called as directional gyro-armature).

I'm simply describing the correct terminology for the OP's mysterious liquid mercury anti-gravity engine, so that others can research it on their own time. If it doesn't work in a vacuum then it's not anti-gravity but something more akin to an ionic-wind lifting device.

Mercury based Anti-Gravity Technology?, page 1

But the fluid state of mercury may be of far greater importance today, as its ability to conduct electricity while in a liquid form like this may present unique possibilities when it comes to mechanical engineering and the creation of electromotive devices capable of producing current.

According to Cook's interview with Witkowski, this device contained two counter-rotating cylinders that would be "filled with a substance similar to mercury, violet in color". This metallic liquid was codenamed "Xerum 525" and was "stored in a tall, thin thermos, one meter high and encapsulated in lead."

Even if some turbulent liquid flow gets going in the liquid mercury, I don't see how it could be sustained without some additional energy source. So a mercury drop should fall, roughly similarly to other pieces of metal. The previous question about mercury in sealed containers seemed to involve some old myth. Mike W. (published on 07/14/2009)
